

Biology Research Proposal Topics

- Sea level rise effect on mangroves
- How to make coral reefs more resilient
- Fishery policies to protect coral reefs
- How to maximize learning from biology field work
- Enhanced wound healing techniques
- Genetics and diabetes
- Experimental therapeutics for diabetes
- Drug delivery systems through the use of hydrogel
- Stem cell engineering of liver tissue
- Understanding protein aggregation
- What is the role of miRNAs in the development of cancer
- Creating polymer conjugates for the use in drug delivery
- What is happening to our pollinators?
- What is the effect of quarry restoration projects?
- The effect of free roaming domestic cats and dogs in conservation areas
- Enhancing biofuel production
- Challenges of Lunar agriculture
- Creation of synthetic cells
- Do multiple abortions affect a woman's ability to conceive naturally
- Effective alternatives to animal testing
- The effect of climate change on flowering of various plant species
- The effect of magnetic fields on living organisms
- Bringing back the dead after they have been frozen
- Does the body already have everything it needs to fight cancer?
- The effect of diets on cancer survival

- Monoclonal antibodies and cancer therapy
- The effect of caffeine on cell growth
- Can diet reverse diabetes?
- Using simple sugar as a healing agent in open wounds
- Do plants really communicate?
